

## JOB POSTING FOR CORE LOGGING GEOLOGIST

Aurora Geosciences Ltd is currently seeking to hire experienced Core Logging Geologists for upcoming summer exploration programs.

The Core Logging Geologist will be responsible for the following:

- Identify and describe lithological units, structure, alteration, and mineralization within drill core
- Assist geological technicians in marking orientations lines on core
- Identify and mark sample intervals
- Assist with geotechnical data collection, as required
- Field work activities could include: collar surveys, drill hole shutdown and drill line up
- Other duties could include: prospecting, soil sampling, mapping, RTK GPS surveying
- Complying with all Health Safety Security and Environmental rules and company policies of the company

The successful candidate should have the following capabilities:

- B.Sc. in Geology
- Ability to survey drill collar locations
- Ability to produce detailed, accurate logs
- Stand or hike for several hours a day
- Field sampling experience
- Ability to lift 50 lbs frequently
- Conduct safety inspections
- Able to work in extreme weather
- Desire to learn local geology
- Capable and comfortable with working around wildlife

Interested applicants should apply [online](#) and then submit their resume to [careers@aurorageosciences.com](mailto:careers@aurorageosciences.com) with **Core Logging Geologist** as the subject
