JOB POSTING FOR SENIOR GEOPHYSICAL TECHNICIAN

Aurora Geosciences Ltd (AGL) is a mineral exploration consulting company that has been operating for 39 years in the North and has offices in Whitehorse, Yellowknife, Vancouver and Juneau AK.

Reporting to the Operations Manager, the Senior Geophysical Technician is responsible for ensuring the completion of assigned projects in the field. Their principal responsibilities are to lead, organize and supervise their field crews for the successful completion of their assigned projects.

Responsibilities could include:

- Work closely with the Project Manager to implement project scope with field crews
- Direct and supervise field crews
- Provide training and supervision to field crews
- To prepare field, technical, assessment and other reports
- Ensure company and client operational and safety standards are adhered to

The ideal candidate will have:

- 5 years of relevant field experience, specifically Magnetism, Induced Polarization and Gravity Surveys experience
- Be in good health and physically fit
- Comfortable working in all weather, remote camp settings
- The knowledge, or have the ability to quickly learn, any survey that AGL has to offer to its clients.

Interested applicants should apply [online](#) and then submit their resume to careers@aurorageosciences.com with **Senior Geophysical Technician** as the subject.
